VS-Series
Intelligent Life Safety Systems

An **EDWARDS** brand.

See what's possible now.

Stylishly Simple

Quick setup, easy maintenance, and striking good looks makes VS-Series the life safety system of choice for architects and building owners alike...

- ✓ Simple and intuitive front panel control
- ✓ Reduced chance of nuisance alarms
- ✓ Pinpoint alarm location for fast response
- ✓ Easy maintenance
- ✓ Straightforward annual inspections
- ✓ Architecturally pleasing panel and device design

You want to focus on your building, not its life safety system. The quick setup enjoyed by installers, coupled with the high efficiency gained by service and maintenance personnel makes the VS-Series the best choice for building owners today.

The inherent reliability of intelligent detection and the proven track record of Edwards life safety systems is your assurance that your VS-Series control panel will slip quietly into the background the moment the installer leaves the site, and provide fully-compliant trouble-free service for years to come.

Simple and intuitive front panel operation keeps your building personnel in full control of your VS-Series system. They won't find themselves scrambling for the manual as the system counts down to alarm. And they won't have to call for service every time an electrical storm causes a power outage.

VS-Series represents life safety intelligence geared expressly for smaller applications that used to be the exclusive domain of conventional systems. With VS-Series, you now have access to technology that a short time ago was beyond the reach of most small building budgets.

Site Monitor

Real time incident status software for VS Series fire alarm control panels.

Incident status monitoring for up to 1,000 VS Fire Alarm Control Panels over a supervised IP LAN connection, or wide area networking over the internet.

When you choose a VS-Series life safety system, you're putting your confidence in a name you've known and trusted for years.

Edwards represents a solid foundation of innovation that's been respected for generations, and its expertise has marked some of the most important breakthroughs in technology found among buildings today.

VS-Series fire alarm systems are designed for building owners upon this legacy of innovation, and engineered for life safety system suppliers to exceed the expectations of their customers.

VIGILANT
EOL & LSA READY

Retrofits in a snap

These intelligent systems offer a fast and simple way to upgrade from your cumbersome conventional control panel. In fact, the VS-Series can use device wiring from most legacy systems with no effect on performance. This means you don't have to bear the expense of rewiring your building, or endure the disruption it would cause among building occupants.

VS-Series can be configured using a default general alarm, or it can be customized for special alarm sequences. Programming is quick and easy, and can be accomplished at the front panel, or remotely via PC – provided a technician is on-site to verify correct system operation.

No more nuisance alarms

With automatic drift compensation, the VS-Series continuously tunes detector sensitivity by adjusting for environmental conditions such as dirt and humidity. Detector sensitivity can also be adjusted for the time of day. Typically less sensitive during working hours and more sensitive at night. This feature further reduces the risk of nuisance alarms, avoiding the disruption to building occupants, and fire department fines that result.

NFPA-compliant detector diagnostics makes annual testing simple and quick. Building occupants aren't overrun with technicians, and sensitive building areas remain secure at all times.

Sleek, low-profile Genesis signals are an architecturally-pleasing complement to VS-Series control panels and annunciators.

Intelligent VS-Series detectors offer reliability that virtually eliminates nuisance alarms — and the cost and disruption that results.

R-Series remote annunciators keep system indication and control within easy reach of your maintenance personnel at all times.

An attractive choice

The attractive appearance of VS-Series control panels means they won't be a blemish on an expensive architectural design. Their gently curved doorfronTS offer a distinctive flair with available red or silver finishes. Controls are discreetly inset behind a striking black bezel.

Sleek, low-profile Genesis signals complement the overall design appeal of VS-Series, also providing independent horn silence over two wires. And that makes the VS-Series/Genesis combination an even more attractive choice for your building.

THE VS-SERIES ADVANTAGE

✓ Ethernet Port

Remote diagnostics, programming and reports simplify system operation and maintenance

✓ Incremental Autoprogramming

Easy to make changes that keep pace with your building needs

✓ Intelligent Analog Detection

Pinpoints alarm location and provides replaceable chamber

✓ Support for Genesis Signals

Built-in UL 1971-compliant strobe synchronization, plus independent horn silence over two wires

✓ Up to 500 Detectors & Modules

Large "small system" capacity with lots of room for expansion

✓ NFPA-Compliant Detector Testing

Fast annual inspections,

✓ Module-level Ground Fault Support

Pinpoints the location of a device in trouble, reduces troubleshooting time onsite

VS2: one loop that supports up to 250 intelligent devices. Can be expanded to two loops. Each loop supports up to 125 detectors and up to 125 modules.

VS1: one loop that supports up to 64 intelligent devices of any type.

VS2: Four Class B or two Class A NACs

VS1: Two Class B or two optional Class A NACs

Any combination of up to eight LCD, LED, and graphic serial annunciators

Ethernet

DACT/Dialer

RS-232

Relays: Two Form C, one form A

Innovation, leadership, and a rich tradition of excellence

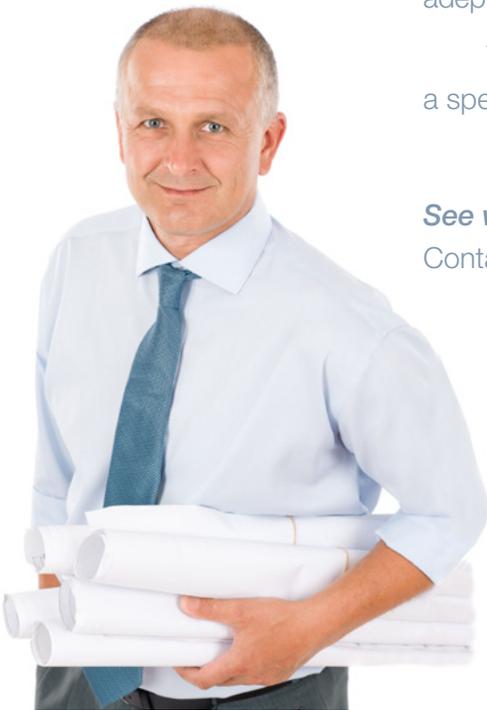

When building owners and designers do business with Edwards, their investment is underwritten by a solid 140-year history of dedication to the fire alarm industry. That's why today architects and engineers agree that when it comes to protecting people and property, Vigilant life safety products and systems remain the technology of choice.

Our strength is in our dealer network — the people and organizations we entrust with the technology that has charted the course of detection and alarm for decades. Vigilant dealers are independent contractors that form an integral part of the Edwards marketing and support organization. They enjoy exclusive access to products, custom design innovations, and specialized training — and they are adept at ensuring that each proposal is strong and competitive.

These strengths set Vigilant installations apart, and have earned this brand a special place among life safety solutions available today.
